Installation:

Create a new Unity project either using Universal 3D (URP) or High Definition (HDRP).

Open the Package Manager and Import `Samples>Learning Templates`.

- After installation, a `Samples>Visual Effect Graph>x.x.x (Version)>Learning Templates` folder will be added to the project assets.

To open the template scene, navigate to `Scenes>URP_VFX_Learning_Templates.unity` and open the scene.

Opening the inspector on `Hierarchy>Sample_Showcase` will allow you to select which object you look at as well as the option to `Open VFX` to see the graph that makes up VFX graph.

Note - You may need to install TMP as well.

To make a basic VFX graph:

`Create>Visual Effects>Visual Effects Graph`

In the graph itself add these nodes the associated parts;

Spawn - *Constant Spawn Rate*

Initialise Particle - *Set Velocity*

Output Particle - *Default-Particle*

Extras;

`Properties>Variables` to control various parameters with scripts.

Spawn - *Set Lifetime, Set Position Shape*

Update Particles - *Turbulence*

Output Particle - *Set Colour Over Life, Orient: Face Camera Plane*
